

New Iceross® Seal-In® Liner Is a Near Complete Prosthetic Attachment

Advancing liner technology one step further, the new Iceross® Seal-In® Liner by Ossur North America is as close as the company has come to complete prosthetic attachment, with the convenience of a simple step-in-and-go system. The retrofitable liner provides unmatched performance and favorable patient outcomes, making the user feel more confident and better able to perform a broad range of activities.

The new system for transtibial users applies pure suction but does not require an external sleeve, saving time and money along with increased comfort and knee motion. A proprietary design with five separate seal bridges between the residual limb and the internal socket wall, the liner conforms and clings tightly, guaranteeing suspension, rotation control and proprioception. The release button on the socket valve permits air pressure equalization and makes doffing the prosthesis a simple and easy task.

For more information, call (800) 233-6263 or visit the Ossur Web site at www.ossur.com.

Enhanced Alpha® Flex Sleeve Available

The Alpha® Flex Sleeve by Ohio Willow Wood now features Kevlar®-reinforced Alpha gel for even greater durability, greater puncture resistance, and greater abrasion resistance while continuing to provide an increased range of motion.

Alpha Flex Sleeve fabric is highly flexible and provides comfort and flexibility when worn. The sleeve uses a unique blend of Kevlar® pulp and the traditional Alpha gel with mineral oil. This blend provides increased performance without

compromising comfort. An interior polyurethane pad at the socket brim line provides extra protection for sleeve longevity. For even longer sleeve life, use the Alpha Flex Sleeve with the Alpha Sleeve Protector.

The Alpha Flex Sleeve is designed for use with LimbLogic™ VS for creating an airtight seal. The Alpha Flex sleeve is also compatible with traditional suction and locking suspension methods.

Available in either black or buff fabric, the Alpha Flex Sleeve is offered in seven sizes and has a 90-day warranty.

For more information, call (800) 848-4930 or visit the Ohio Willow Wood Web site at www.owwco.com.

New Design for Otto Bock 3R80 Rotary Hydraulic Knee

Otto Bock redesigned the 3R80 rotary hydraulic knee so it provides more control as you move across a variety of terrains, from smooth indoor surfaces to rough and rocky slopes. The new design makes it easier to initiate flexion of the knee to swing the leg forward.

The 3R80 knee joint is designed for people who are very active and have few, if any, mobility restrictions. It's superb for high energy activities such as basketball, bicycling or brisk walking.
